

ABSTRACT OF THE DISCLOSURE

The invention is to provide an image forming apparatus capable of suppressing a waving of a recording material. For this purpose, there is

5 provided an image forming apparatus having:

an image forming device for forming an image on a recording material;

a fixing device for fixing the image formed on the recording material; and

10 a recording material conveying device which is provided at a downstream side of the fixing device in a moving direction of the recording material, the conveying device including a first roller having a first shaft and a second roller having a second shaft  
15 and maintained in contact with the first roller;

wherein the second roller includes a first portion provided in a vicinity of a passing reference of the recording material and maintained in contact with the first roller, and a second portion  
20 positioned farther from the reference than the first portion and having a diameter smaller than that of the first portion.
